CODE SCREENSHOT

The screenshot shows a code editor with the following components:

- EXPLORER:** A sidebar on the left showing the project structure. The 'src' folder is expanded, listing files like App.css, App.js, App.test.js, firebase.js (selected), home.css, home.jsx, index.css, index.html, index.js, Login.css, Login.jsx, logo.svg, reportWebVitals.js, setupTests.js, Signup.css, Signup.jsx, .gitignore, package-lock.json, package.json, and README.md.
- Code Editor:** The main area displays the content of 'firebase.js'. It imports functions from 'firebase/app', 'firebase/auth', and 'firebase/firestore'. It defines a 'firebaseConfig' object with project details and initializes the Firebase app and Firestore database. The code ends with an export of 'auth' and 'db'.
- TERMINAL:** At the bottom, the terminal shows the command 'zsh' and the output 'Compiled successfully!'. It also provides the local and network URLs for viewing the application in a browser.
